

Automated Document Redaction Software

Redactivue is a platform which enables users to quickly and efficiently design, test, and deploy automated redaction solutions. Available as a solution or as a service, Redactivue is the new standard for redaction best practices.

Hallmark Features:

- *Enables Redaction-Aware document management for business software applications quickly and easily*
- *Real-time filter testing provides methods to rapidly optimize accuracy using one of three powerful filter models:*
 - ◇ *Pattern Matching*
 - ◇ *Label Proximity*
 - ◇ *Fixed Templates*
- *Allows restricted information to have different redaction levels to simultaneously accommodate multiple views to the same document without file duplication*
- *Preserves redaction history, rules applied, and user approval workflow activity*
- *Comprehensive document and meta-data export to any system, including:*
 - ◇ *ECM platforms (SharePoint)*
 - ◇ *Web sites (Public Records on the Internet)*
 - ◇ *Business applications*
 - ◆ *ERP*
 - ◆ *CRM*
 - ◆ *Court Management*
 - ◆ *EMR / Medical*
 - ◆ *Police Records*
 - ◆ *Financial*
 - ◆ *HRIS*
- *“Evergreen” redaction database eliminates re-work related to previously processed documents by applying incremental rules updates in real-time with only new “hits” flagged for redaction.*

Today's information privacy and dissemination laws place heavy burdens on organizations responsible for documents that contain private information which cannot be shared. Manual methods to restrict specific document content from view (redaction) are resource intensive, error prone, and costly. In many cases, an organizations budget and manpower limitations make it extremely difficult to be in compliance. Intellinetics automated redaction solution, Redactivue, provides practical answers to these challenges.

Platform Overview

Redactivue is designed to enable users to quickly and efficiently design, test, and deploy intelligent redaction templates which support an unlimited number of unique content filters. Redactivue also includes a comprehensive quality review and approval workflow engine that is completely configurable by document category. As a result, unique law and policy requirements may be accommodated within one simple to manage framework.

Deployment Models

As an enterprise class engine, Redactivue is extremely flexible and can function in several different models across an organization, including:

- End to End Document Management Solution
- Pre-process to existing ECM
- Integrated sub-system to another business software application (Redaction-enabling)

Deployment flexibility delivers value by enabling users to use multiple models simultaneously across the enterprise which are supported by a common engine. Further, any/all of these models can blend user controlled, semi-automated, or fully automated redaction methods to maximize throughput yet accommodate accuracy requirements.

Platform Components

Capture

- High volume / ad-hoc capture
- High volume / ad-hoc import
- Image clean-up

Indexing

- Key from image
- Bar codes for batching / document ID
- Zonal OCR
- Database lookup(s)

Redaction Services

- Full text OCR
- Unlimited document categories
- Unlimited redaction templates
- Unlimited redaction rules
- Simultaneous support of all filter methods

Quality Assurance

- Redaction review workflow enables users to approve / modify / reject redaction “hits”
- Annotate documents and/or specific redactions
- User controlled redaction status updates from pending to approved.
- Restrict user access to specific document categories.

Administration

- Access control /security / audit configuration
- Redaction templates / rules
- User management
- Taxonomy design / folder structure
- Quality review / workflow design
- Data export configuration
- Performance / throughput / status monitor

Integration Tools

- Web services API
- Redaction—aware viewer component
- Publish to Internet

Smarter documents mean smarter business. Intellinetics: A legacy of redaction excellence since 1994.
